

MADE IN RATIO ALPHA CHAIR CARE AND MAINTENANCE

ALPHA CHAIR

The Alpha chair is made from sustainably sourced European oak or walnut and finished with a hand-applied natural oil or black spray lacquer for lasting protection. We offer the chair in oak, ebonised oak or walnut with the option of an upholstered leather seat.

CARE AND MAINTENANCE

Wood is a natural material and can vary in grain, tone and colour. Exposure to light can affect the tone and colour of the wood so we advise to keep the Alpha chair away from direct sunlight. Unusually high or low humidity levels can cause wood to move and warp over time so we recommend keeping the Alpha chair in a stable environment.

The oil finish is used to highlight and protect the properties of the natural material. To avoid stains and other damage liquids should be wiped clean immediately using a soft cloth. In the case of stubborn stains add a mild detergent to a slightly damp soft cloth.

Wood is susceptible to bruising and scratching from heavy use and movement. The chair should always be lifted and placed carefully instead of dragged.

For small repairs of stains and minor scratches on the natural oak and walnut finish, rub the surface lightly in the direction of the wood grain using a high grade sandpaper, we recommend using 600 or 800 grit. Apply a natural furniture oil, in keeping with the colour of the chair, to the affected area following the instructions on the tin. If the scratches are deep we advise you consult a professional furniture restorer.

To clean the leather seat use a slightly damp cloth, if needed use a small amount of mild detergent.

If the leather has begun to look matte you can apply a small amount of clear leather polish using a sponge.
